

Geo Hack-n-Hunt Prize Challenge

22 February - 15 April

For a 60-day period, SOFWERX, in collaboration with USSOCOM, held a TeamWERX Prize Challenge to advance the current state of geospatial technology in an offline environment. The challenge encapsulated the ability to use navigation assistance paired with augmented and mixed reality software elements (along with other features).

These improvements upon the current geospatial platform will create a more aware and easier to use GeoPackage for the Warfighter, specifically in an offline environment.

Judging Criteria

- Must run on android mobile device (phone or tablet)
- Must operate without internet connectivity
- Must use mobile device camera, GPS, manometer/compass, and acceleromater sensors
- The software must be able to build and install according to supplied instructions
- Must have accurate location of live AR navigation aids

Challenge Winners

- Design Interactive, Inc. - \$5,000
- Terranodo LLC - \$5,000
- Cognitics, Inc. - \$5,000
